ILYA LIPKIN, DDS • Orthodontics (NJ specialty permit #5308)

"In orthodontics, the right diagnosis is the key to success," says Dr. Ilya Lipkin. With his thorough approach, specialized training, and state-of-the-art technology, he provides the highest-quality care to all patients, including those misdiagnosed or mistreated elsewhere. "We do it right the first time, or we don't do it at all," he says.

This board-certified orthodontist is one of few to employ 3-D imaging and highly customized SureSmile® 3-D treatment planning to achieve a life-changing smile for every patient. After Dr. Lipkin earned his dental degree and completed an orthodontic residency at NYU, he spent two more years studying the relationship between teeth and jaw joints, something missing in traditional orthodontic education. That relationship is critical to long-term stability and temporomandibular joint (TMJ) health. This approach to care is known as the Roth-Williams philosophy (similar to Dawson and Pankey teachings for general dentists), and includes clearly defined goals and individualized treatment for every patient. Dr. Lipkin works together with associate Dr. Adam Cohen (NJ specialty permit #6057), offering a variety of options, from Invisalign® and inside braces, to conservative TMJ treatment.

Patients of all ages receive a friendly welcome at this office. Half of Dr. Lipkin's patients are adults who have discovered that today's braces are faster and more comfortable than they used to be. His patient roster includes actors, fellow dentists and their families, and even a few beauty pageant winners. Dr. Lipkin says, "I love what I do, because I have a 100 percent cure rate—every patient leaves with a healthy and beautiful smile!"
